## LE and IE Range of Flighted Belt Loading Elevators

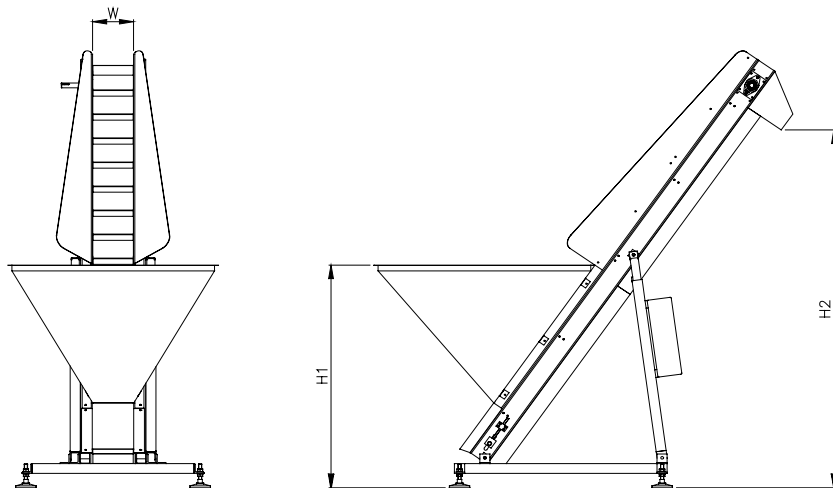

The Comcount LE range of Loading Elevators are specifically designed to feed products from a low level gravity hopper bin into an automatic counting or weighing system.

The units are generally suitable for use with lightweight free flowing products such as plastic mouldings, caps and closures and medical parts etc.

The unit basically consists of an inclined elevating conveyor with heavy-duty plastic flight, a variable speed drive motor and a stainless steel gravity hopper bin to hold the bulk product.

The IE 300 Elevator is an alternative style unit designed for feeding components that require very gentle handling. The Elevator has a shallow incline without the gravity hopper so that the parts are moved gently along the conveyor minimising the chance of damage.

| Model  | Belt Width | Hopper Volume |
|--------|------------|---------------|
| LE 150 | 150 mm     | 100 Litres    |
| LE 200 | 200 mm     | 200 Litres    |
| LE 300 | 300 mm     | 300 Litres    |
| IE 300 | 300 mm     | 100 Litres    |

### **Standard Features**

Heavy duty plastic elevator belt with lifting flights attached suitable for handling light weight free flowing components with a minimum thickness of 3mm.

Stainless steel bulk hopper with convenient loading height. White food grade quality belt available for running pharmaceutical and medical parts.

Electrical control system with variable speed drive for motor and synchronisation to Comcount automatic weighing or counting machine.

Units can be produced in a range of different height and configurations to suit the particular application.

### **Optional Extras**

Heavier duty version of Loading Elevator available with moulded plastic slat belt and steel hopper with plastic lining on inside faces for running more industrial components.

IE 300 Inclined Elevator available for handling light weight more delicate parts without damage.
