

COMCOUNT

Model STW Linear Weigh Counting Machine for Carton Filling

The Comcount Model STW is an entry level semi automatic linear weigh counting machine specifically designed to fill components directly into cartons.

The system is extremely flexible and can be utilised to handle a wide variety of components ranging from plastic mouldings up to heavier screws and fixings.

The operator manually places a box on the weigh platform and the system feeds the components from the bulk hopper via a single tray feed system into the carton until the required quantity is achieved.

The system is extremely simple to operate and is ideal for smaller batch production allowing the most efficient use to be made of a single operator.

The STW machines are controlled by a sophisticated Siemens PLC based control system, which utilises a touch screen display for data entry and menu storage of product settings.
