Model CW 150 Filled bag Automatic Checkweigher

Simple policeman style Checkweigher ideal for use with an Automatic Bagmaker to weigh check and automatically reject out of tolerance bags.

Bags are fed into the Checkweigher from the Automatic Bagmaker by a flighted belt inclined conveyor. The bags are then fed into a Weighpan, which is mounted on a high precision weighing mechanism.

The check weighed bags are fed from the weighpan on to a separate accept / reject conveyor which feeds the good bags to one side or reverses to feed the reject bags to the opposite side.

The whole operation is controlled by a Siemens control system with touch screen display for setting machine operating parameters.

The standard unit is suitable for bags up to 150W by 150L mm with a maximum weight of 500g. The unit has a display resolution of 0.1g and the maximum operating speed is up to 20 bags per minute depending upon the application.
