Operator Workstations for Autobag AB Range Baggers

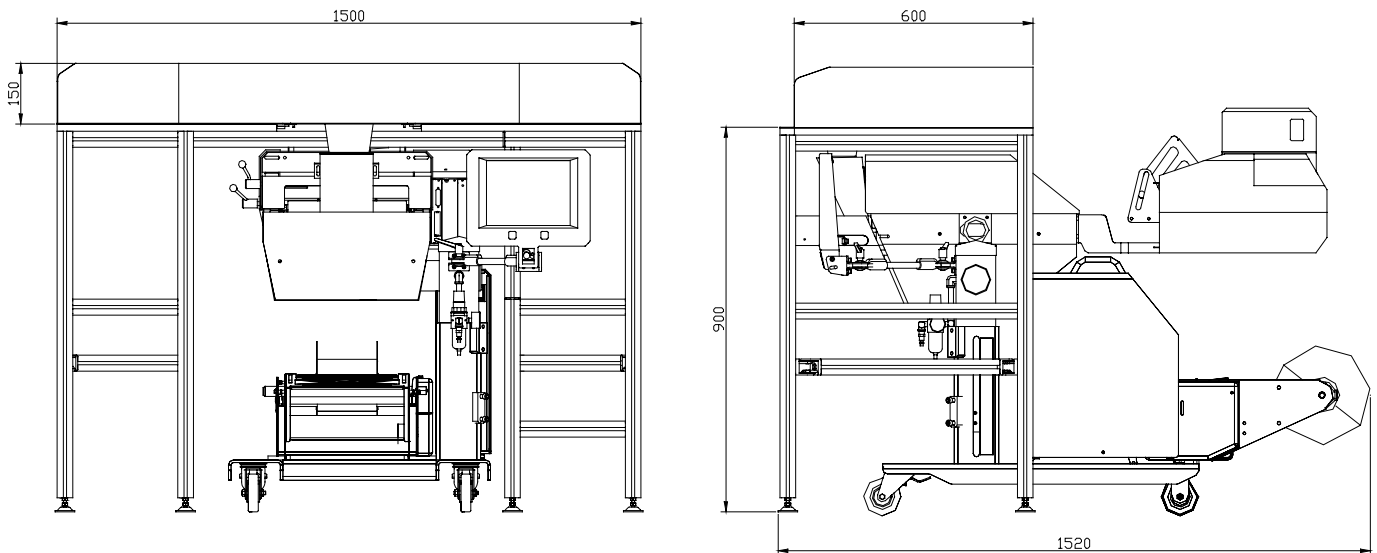

Comcount manufacture a range of operator workstations designed to work in conjunction with an Autobag Bagger to maximise operator efficiency and comfort in hand load applications.

The unit basically consists of a free standing aluminium framework, which supports a stainless steel packing table incorporating a chute into the Autobag Bagger inlet.

The worktable can be open or be configured with different numbers and sizes of parts bins to hold the items to be packed making it ideal for producing spare parts, packs or fixing kits.

A special version of the workstation can also be produced with a basic weigh/counting scale integrated to enable the operator to achieve the correct weight or count of components prior to bagging.

Standard Features

Specifically designed to work with Autobag AB Range Bagger/Printer Systems in hand load applications.

Ergonomic design to position parts to be packed within easy reach of operator.

Stainless steel packing table with central chute into Autobag infeed, push button or footswitch start.

Quick release slide out chute section, which can be removed for packing larger items or setting up Bagger.

Ideal solution to efficiently pack items such as flat pack furniture fixing kits and spare parts packs where multiple components need to be held in easy reach of the operator.

Options

Optional stainless steel parts bins are available in a range of different sizes and configurations to fit on to the workstation.

Optional upper level can be fitted to hold additional plastic parts bins for more complicated kits.

Special version of workstation available with integrated weigh scale for basic weigh/counting facility.
