Fully Automatic Kit Packing Lines

A Comcount kit packing line enables any number of counting machines to be combined with an automatic bagmaker to produce multiple item furniture assembly packs and spare parts kits etc.

The system basically comprises Comcount BF or BFW series counting machines, an indexing pocket conveyor to collate the counter outputs and an automatic bagging machine.

Any size or style of Comcount counting machine can be utilised and manual workstations can be included when the kit contains items not suitable for automatic feeding.

The systems are available in a wide range of different sizes and configurations and can be produced in a modular format allowing additional counting machines and accessories to be added as required.

Automatic Kit Packing Lines

- Available in a wide range of different sizes and configurations. Indexing conveyors are generally produced to accept from 2 to 12 counting machines.
- Indexing conveyors can accept any size or style of Comcount BF or BFW bowl feeder based counting machines plus hand packing workstations.
- Comcount BFW machines with integral checkweigh and auto reject system can be employed when maximum accuracy is required, hence only correct counts are discharged into the indexing conveyor and bagmaker.
- Indexing conveyors are produced with a special fully sealed pocket allowing very small components to be run with no chance of spillage from the conveyor. Optional bucket conveyors are available for larger applications.
- Suitable for use with a range of different bagmakers including Autobag machines or ABG Packmat form fill and seal units depending upon the application.

Optional Extras

- Range of optional extras are available to enhance the system such as infeed hoppers or loading elevators, overprinters or labelling systems and a final bag checkweigher.
- Optional PC based control system to download settings to individual counting machines for fast set up and providing production monitoring information.
